

CONSTRUCTION DEVELOPMENT RENOVATION MAINTENANCE

A WORD FROM OUR PRESIDENT

For more than 100 years, BAUDIN CHATEAUNEUF, historically specialised in metal construction, has continued to enhance its skills and expertise and still confirms its intent to be part of our country's development.

The group's development and success is based primarily on all the companies that have built it over the years, with a shared willingness to work together and face daily challenges. We master what is complicated. Bespoke is our standard. The Tancarville bridge, the Palais omnisport de Paris Bercy (Bercy Arena), the Mont Saint Michel dam, the photovoltaic sail of the Seine Musicale, the ferry bridge of the Martrou, the moucharabiehs of the Institute of the Arab World or even the restoration of the Théâtre du Châtelet and the lifts of the Eiffel Tower, so many large-scale works that require both high-level technical skills and coordination.

Our entrepreneurial DNA pushes us to put people first. Beyond technical performance, our success comes mainly from the satisfaction of our customers, the trust of our partners and the pride of our 1,500 passionate employees.

**Damien Colombot,
Chairman of the Board of Directors**

THE GROUP

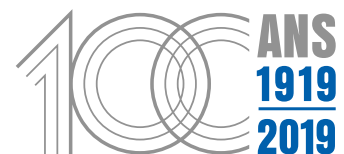

A group with human values

BAUDIN CHATEAUNEUF is a global player in construction and public works ; we design, build and operate projects in the construction, infrastructure and industrial sectors.

Founded in 1919, the independent family business, now run by the fourth generation of founders, has grown to become a recognised group that is broadening its skill-base, diversifying and constantly innovating to renovate our precious historical heritage and build the territories of tomorrow.

Entrepreneurial spirit, high skill levels, thoroughness, humble and ethical commitment, all values that have driven the group for a century.

Our values

4

Entrepreneurial spirit

Taking the initiative, action, intuition and a winning attitude - the group's great successes are born of the spirit and enthusiasm that everyone brings to everyday activity.

Performance & technical excellence

This is the commitment to engage all the necessary resources and inject the same energy, whatever the scale of the projects, to achieve the objectives set and to satisfy our customers.

Listening & boldness

Without its founders' courage and ability to listen, the Group would not be what it is today. Understanding and anticipating needs, being able to face new challenge, a mind set that has continued among our employees for 100 years.

Sustainable development

It is an integral part of our business model, enabling us to offer our customers products and services with positive environmental and social impact. Reconciling economic and social progress, while preserving the environment and involving all the company's stakeholders - this is our commitment for future generations.

In-house capabilities

ENGINEERING

Our engineers, designers, technicians and draughtsmen analyse the locations, design the most complex operations, draw up construction methods and stages with precision and ingenuity.

PRODUCTION

With multiple manufacturing sites spread throughout France, our teams keep a close watch over all our customers. Our workshops are specialised in all types of manufacturing, from the simplest to the largest parts requiring special transport arrangements.

SITES

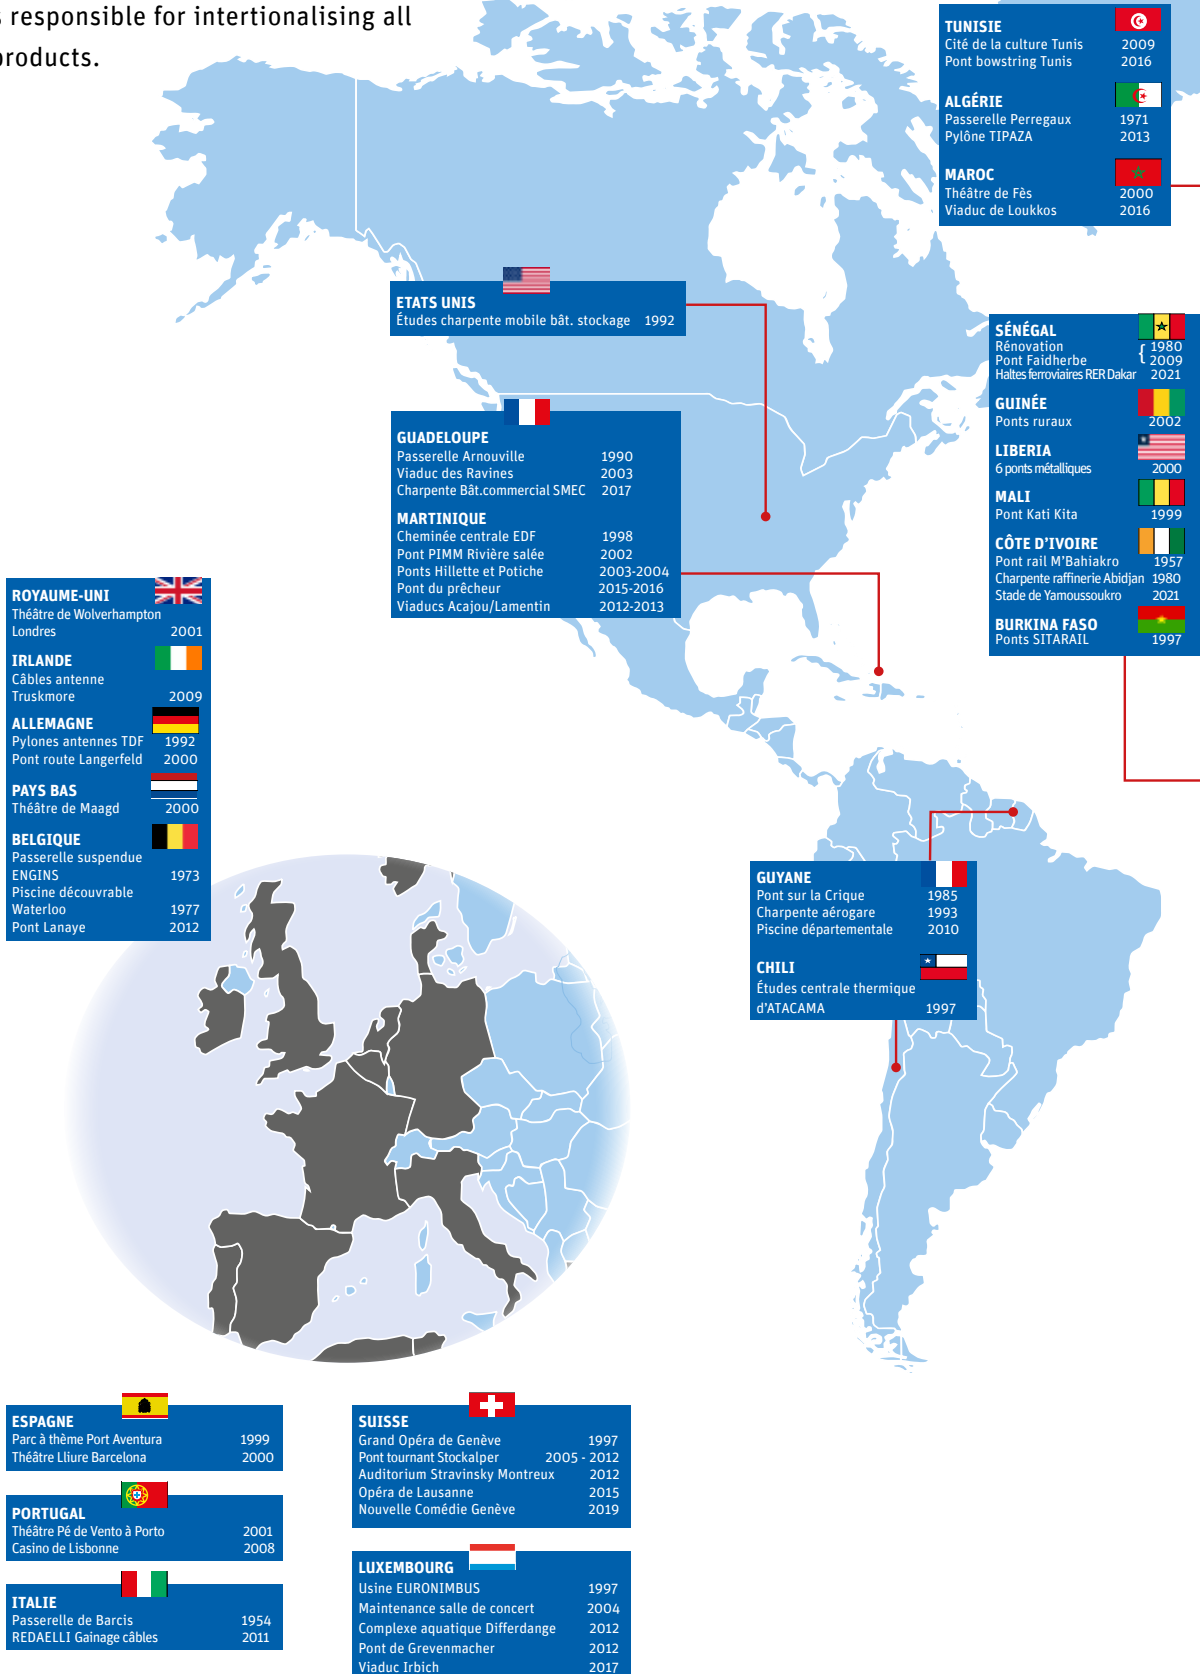

Our works teams operate on many different sites (military, nuclear, petrochemical, etc, ...). Experts in their field, our technicians are trained, qualified to install different contract lots (metal structure, roof, cladding, ironwork, bridge, scaffolding, civil engineering, ...). They have a complete stock of plant and equipment.

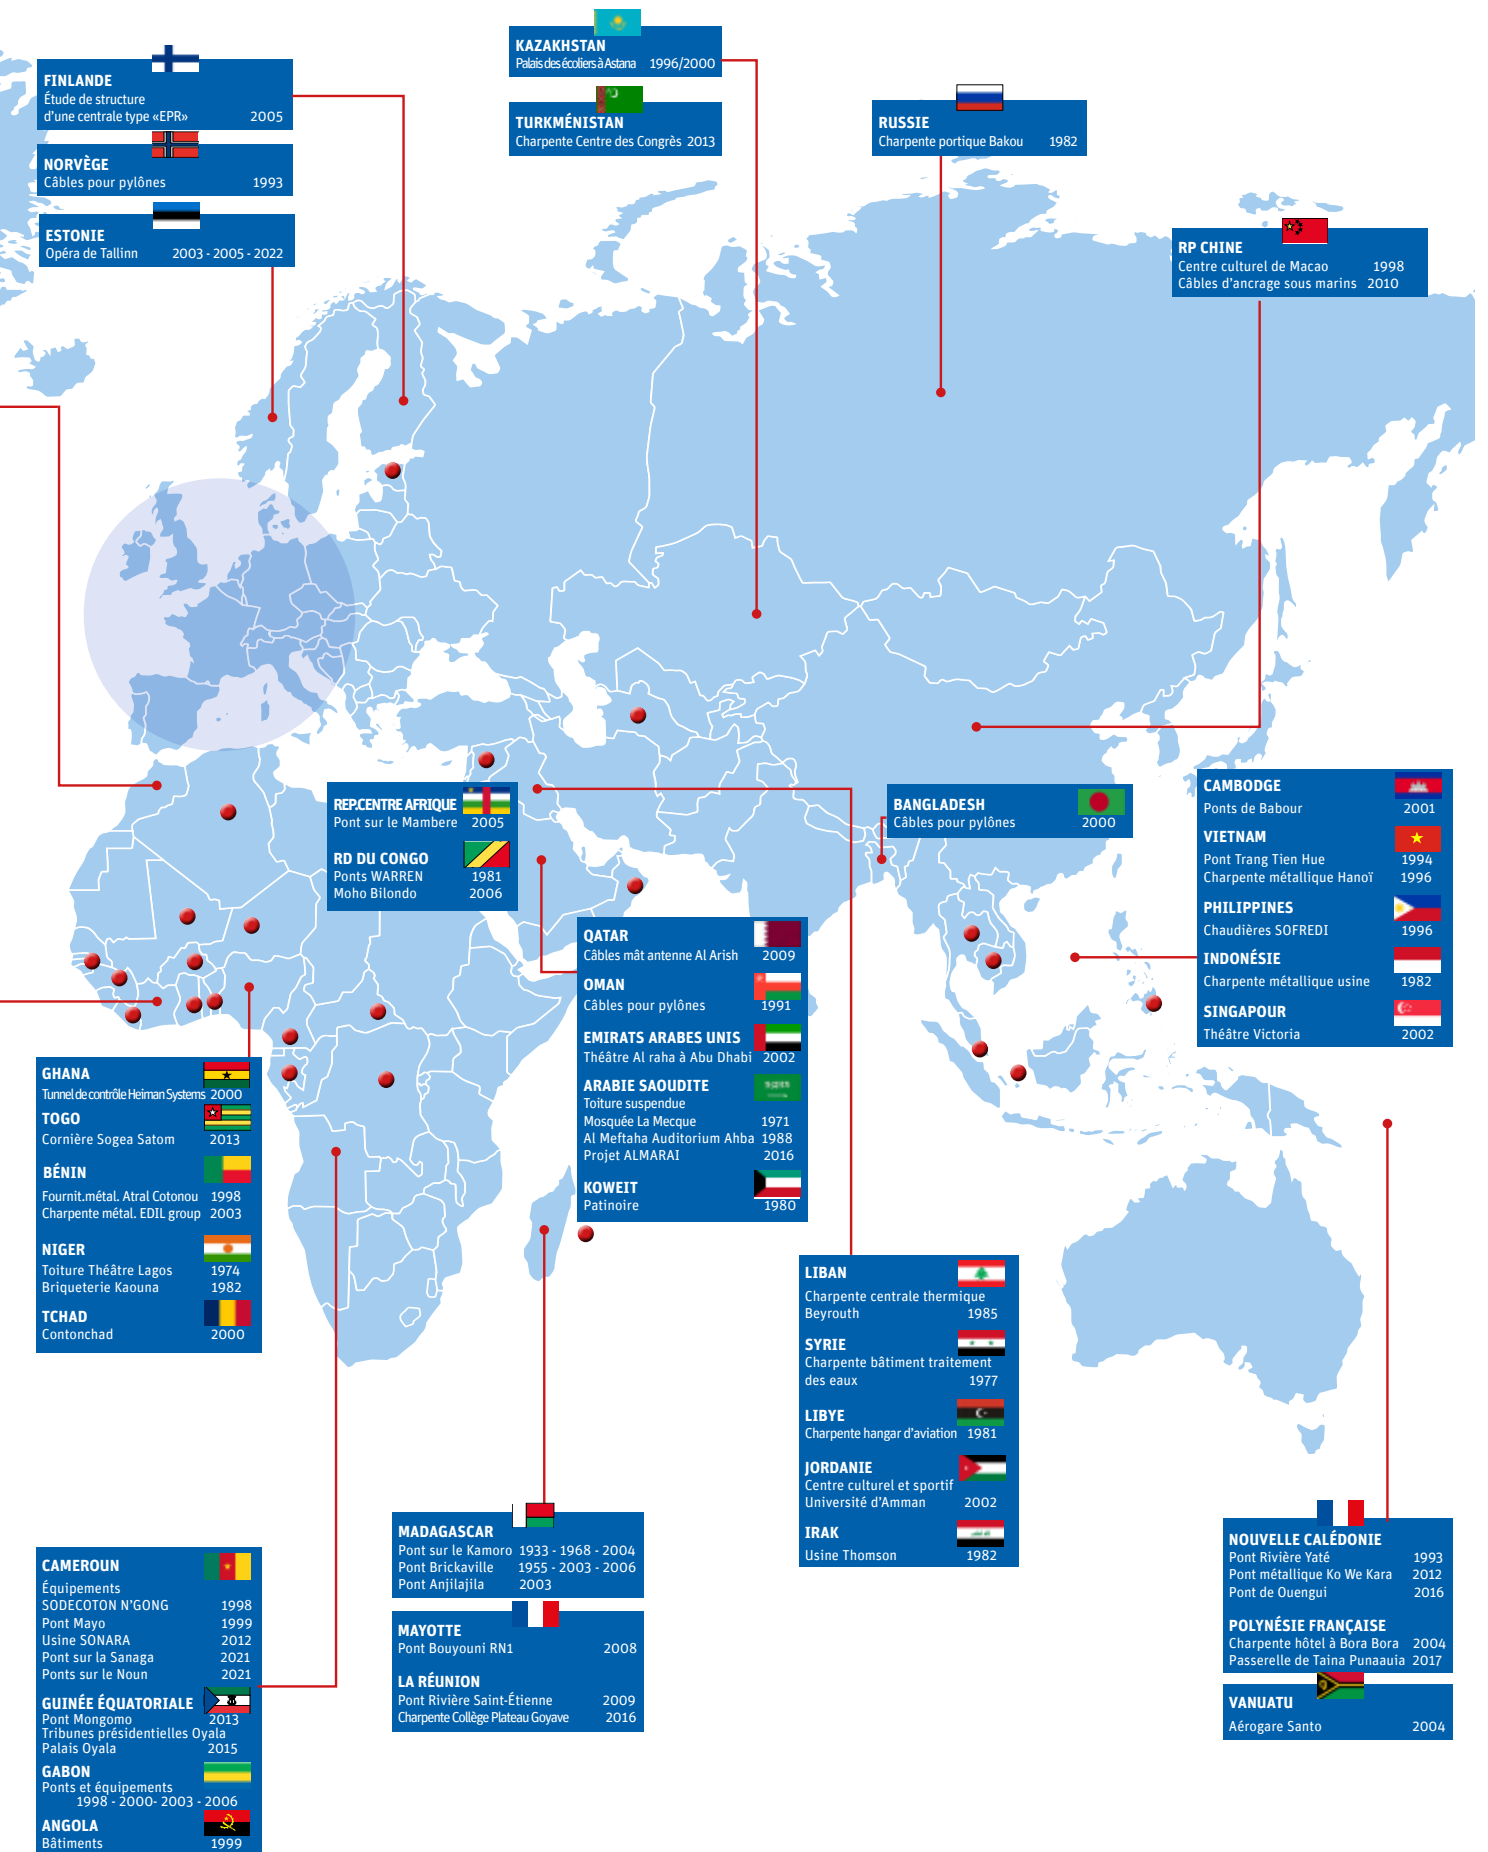

EXPORT

100 years of experience worldwide

In keeping with the group's values and its ethical and environmental commitments, our Export Department is responsible for internationalising all our skills and products.

THE GROUP

TRANSFORM

As part of our continuous improvement approach, focus groups dedicated to new technologies and robotization have been set up. On permanent watch, they work on several projects related to our working methods, in the manufacturing workshop and on our construction sites.

INNOVATE

Innovation makes it possible to meet new needs and offer new solutions. For example, INOXINOV' is a process intended for swimming pool basins which combines a PVC membrane bottom with stainless steel walls. Easy to maintain, this patented system, entirely developed by our engineers, combines durability, aesthetics and economy.

8

Always at the forefront of technology, our teams are among the users of the BIM (Building Information Modeling) process, software for modeling building data in 3D.

COMMIT

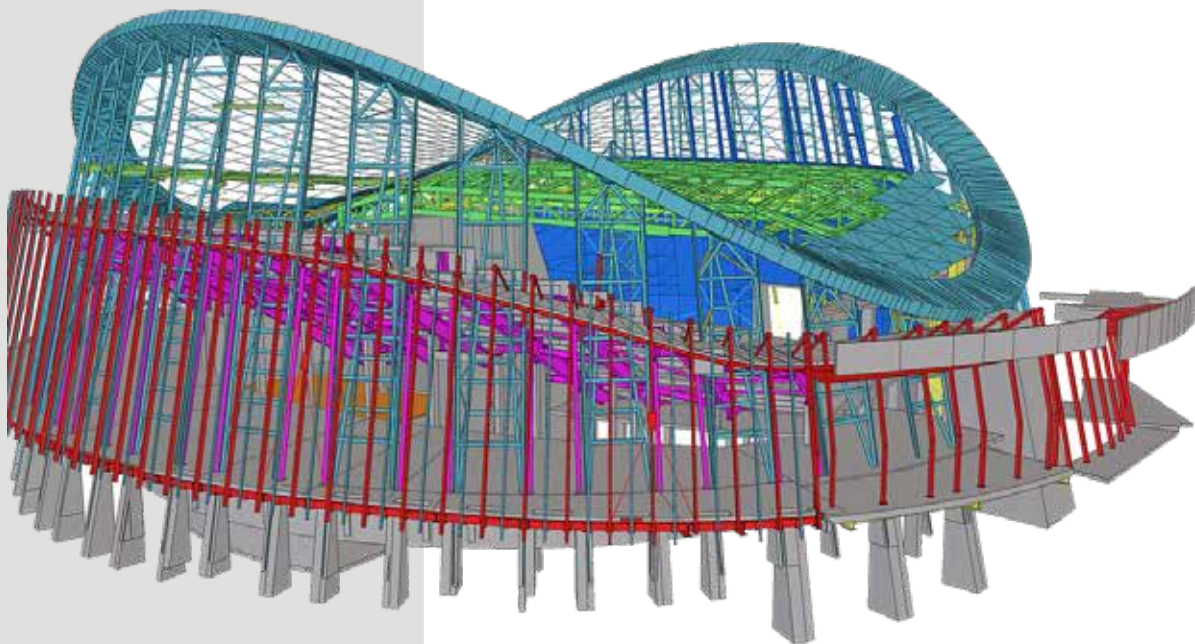

As a member of FrenchFab, the Group is proud to participate in the transformation of industry in France. BAUDIN CHATEAUNEUF is committed, among other things, to placing innovation as a lever for the development of its activities, modernizing its means of production and training its employees in new practices.

Ingenuity at the heart of our performance

The growing complexity of projects requires increasingly advanced technical expertise and innovation capabilities.

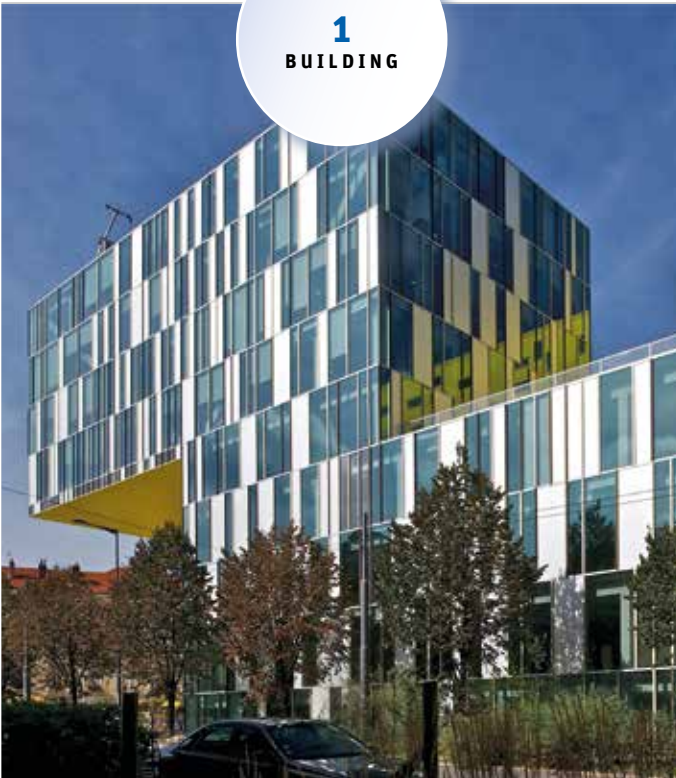

Key to our sustainable growth, innovation and ingenuity are the manifestation of collaborative qualities and the fusion of talents and skills.

Also, we cultivate our openness to new ideas and initiative. Our development involves the regular launch of products, new techniques and tools for which patents are regularly filed.

TRADES BUILDING

Renovation of swimming pools

A very large number of swimming pools were built in France in the 1970s-80s ; these facilities are now reaching end of life, and refurbishing them has become a necessary challenge for many local authorities.

Modernising a swimming pool always involves a technical appraisal of the existing structure and forecasting future needs. The BAUDIN CHATEAUNEUF group has been supporting, repairing, restoring and improving existing aquatic facilities for nearly 25 years. To make them more attractive, you not only have to upgrade them to meet regulations and make them more economical, but also restructure them simply to improve facilities or add fun elements : water games area, sauna, hammam, Nordic pool, etc...

SUPPORT
TRADES

TRANSVERSAL ACTIVITIES

To add complementary skills to our "core" building, construction and civil engineering trades and turnkey solutions for our customers, specialised teams can provide support to the group or directly to customers for the following services :

CABLES

Design, manufacture and installation of TMC single-strand steel cables for cable stayed or suspended bridges, wind turbine pylons and masts, suspended structures and underwater anchoring lines.

SCAFFOLDING

Risk assessment, preventive measures, we study your project in order to bring you the best solution and to guarantee an impeccable quality and maximum safety over the life of the project.

CONSTRUCTION EQUIPMENT RENTAL

Our equipment park offers for hire all the equipment necessary for handling, hydraulic jacking, shoring, etc...

PAINT, ANTI-CORROSION PROTECTION

Our specialist subsidiary, BC SPIR, carries out shotblasting, sandblasting, metallisation, resin coating, intumescent painting, HP&VHP stripping, ...

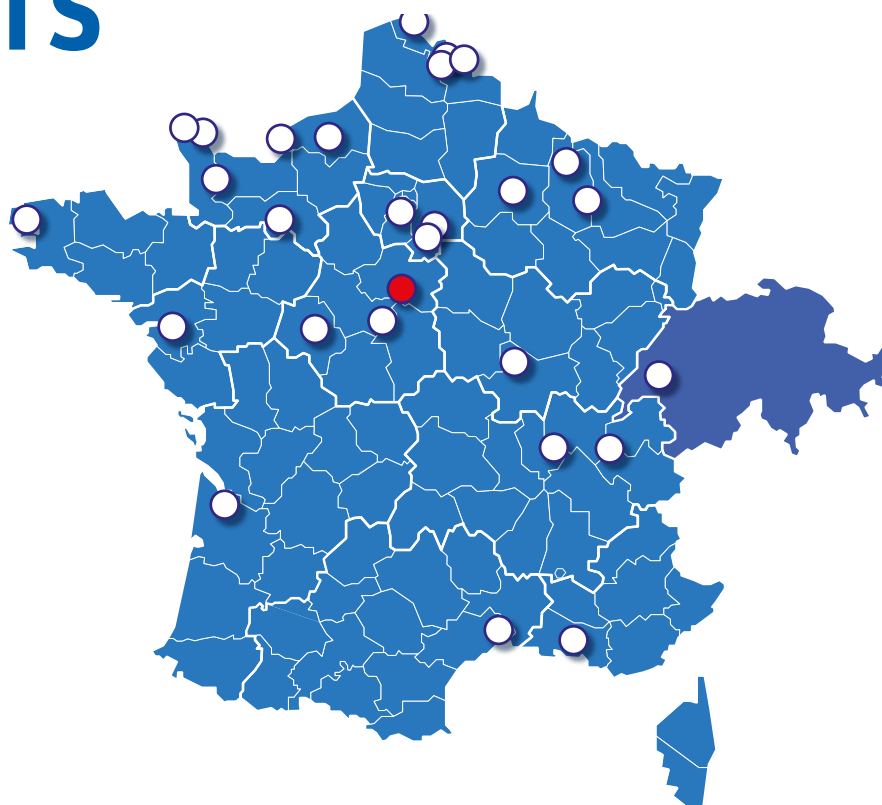

WELDING

Our PROSODURE teams work in workshops and on-site for all types of welding requiring a high degree of qualification.

EXCEPTIONAL TRANSPORT

Whether it concerns exceptional convoys of heavy masses (up to 150T), large widths (up to 7m), height or length (up to 70m), our specialized subsidiary STEX takes charge of your project.
